Abstract

This is a comprehensive placeholder for the abstract to demonstrate the layout. The abstract typically summarizes the background, methodology, results, and conclusions of the study.

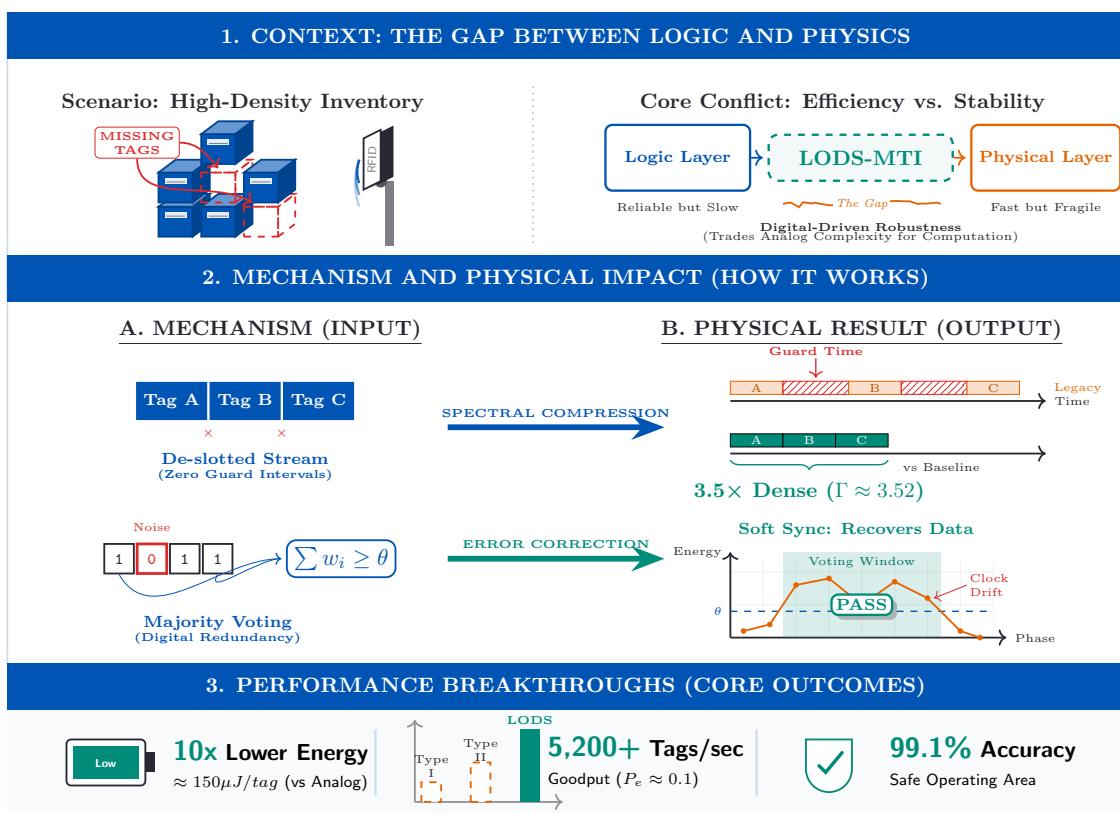

Missing Entity Identification is a crucial problem in large-scale RFID systems. We propose a novel protocol that leverages physical layer information and logical slotting to achieve high throughput. Our experimental results show a significant improvement over existing state-of-the-art solutions. Functional verification confirms the stability under various channel conditions.

Keywords: RFID, Missing Tag Identification, De-slotted Architecture, Perfect Hashing, Link-adaptive.

Graphical Abstract: A visual summary of the main findings.

■ 1. Introduction

Welcome to the **Rho Class Standardized Template**. This template is designed for academic preprints and articles, featuring a clean, professional "Academic Navy" theme. It is built on the 'extarticle' class and fully supports XeLaTeX compilation.

Quick Start Guide:

- Configuration:** Open 'Main.tex' and edit the metadata block (Title, Authors, Affiliations) at the top.
- Class Files:** The core logic resides in the 'class/' directory ('main.cls', 'sup.cls', 'cover.cls'). Do not modify these unless you need to change the global style.
- Compilation:** Use **XeLaTeX + Biber** (for bibliography) + **XeLaTeX** sequence.

■ 2. Template Features

■ 2.1. First Page Elements

- Header:** Displays the Running Title ('') and Lead Author ('').
- Footer:** Contains the Institution Name (''), Preprint Version Date (automatically generated), and Page Number (e.g., "1-5").
- Metadata:** The bottom rule contains the Correspondence (''), License/Funding (''), and Dates (''). Ensure '' is set to enable this block.

■ 2.2. Graphical Abstract

You can include a graphical abstract before the introduction using the ' command.

```
\graphicalabstract{
    \includegraphics[width=0.8\linewidth]{abstract.pdf}
    \captionof{figure}{...}
}
```

■ 2.3. Citations and References

This template uses 'biblatex' with 'biber' backend.

- Add your references to 'ref.bib'.
- Cite them using 'key', e.g., [1] or [2].

■ 2.4. Figures and Tables

Figures should be placed in the 'figures/' directory. Use standard LaTeX environments.

Table 1 demonstrates the default style.

Table 1. Example Table Style

Feature	Command	Note
Lead Author	\leadauthor	Header usage
Institution	\institution	Footer usage
License	\license	Bottom info

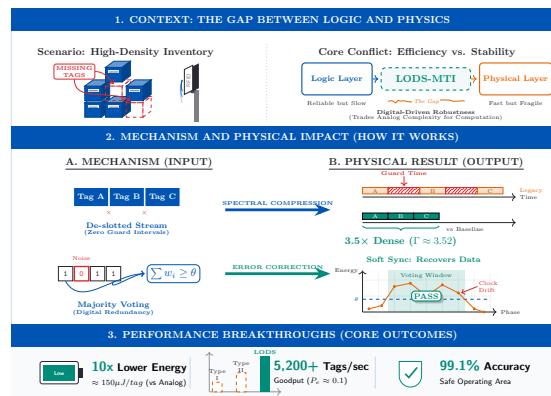

Figure 2. Example of a figure. Note that the caption is left-aligned and colored in Academic Navy.

■ 3. Conclusion

This template aims to provide an "out-of-the-box" experience for professional academic writing. If you encounter missing footer information, please check that '' is present in your preamble.
